Dear Ms. Metviner -- Thanks for your email and your participation in the food scrap recycling program. My wife and I got our bin this weekend.

As to solar, the matter is under study by the the Village Board and the Village Staff and it is hoped we can make some progress along the lines you suggest in the near future -- though the question being focused on is with respect to street facing solar panels since solar panels that do not face the street have been allowed in certain cases. However, we still have a ways to go in studying the matter and taking into account community comments so no prediction on when action on this subject might be taken.

Very truly yours, Jon Mark

Subject: Composting

Hi-

I'm so happy Scarsdale is leading the way in being more green with regard to composting!! I just got my bin today and can't wait to start using it.

I'm hoping soon that pick up for the bags/waste will be from homes (similar to recycle- and on some set schedule) rather than drop offs at Secor. Certainly that will increase participation town-wide which will be better for the environment overall.

Additionally I'm wondering why we don't allow solar panels when they're making them less conspicuous and are SO green. We have friends in long island who receive money back from con Ed every month!! That would make the town more desirable to live in and would mitigate our high taxes somewhat while also being something that reduces our carbon footprint.

Just my 2 cents.

Thanks -
