Subject: Re: Grass disposal

1 . The amount of grass during the high growth periods results in to much volume to be left on the lawn. Clippings will turn brown and look terrible / damage lawn.

2 putting clippings in planting beds... Which will be going on top of all the expensive mulch clients pay for. Is going to look terrible .

3 Another Added expense to the homeowner is guaranteed.(Not to mention the entire town was recently re assessed)

4 Has anyone explored the possibility of increasing the affects on folks with allergies???

5 At the end of the day most of the clippings are still going to end up at the town dump with added expense to the homeowner ...seems like it's more about money then it is the environment ???????
